- > What is parancoe?
- > A simple but useful application for a JUG community
- > Functionalities are
 - Managing Events,
 - participant registration,
 - list of user registered
- > Web application layer
- > Persistence, web interface, authorisation
- > Easy going web application

What is Parancoe?

- > A framework
- > A tool
- > A framework aggregation
- > Objectives
 - A very simple way to build a web application
 - Simple reuse of best tools available
- > Guide lines
 - Convention over configuration
 - Dry
- > Spring, Hibernate, Spring MVC, Maven 2
- > **parancoe.dev.java.net**

simple and useful help to build

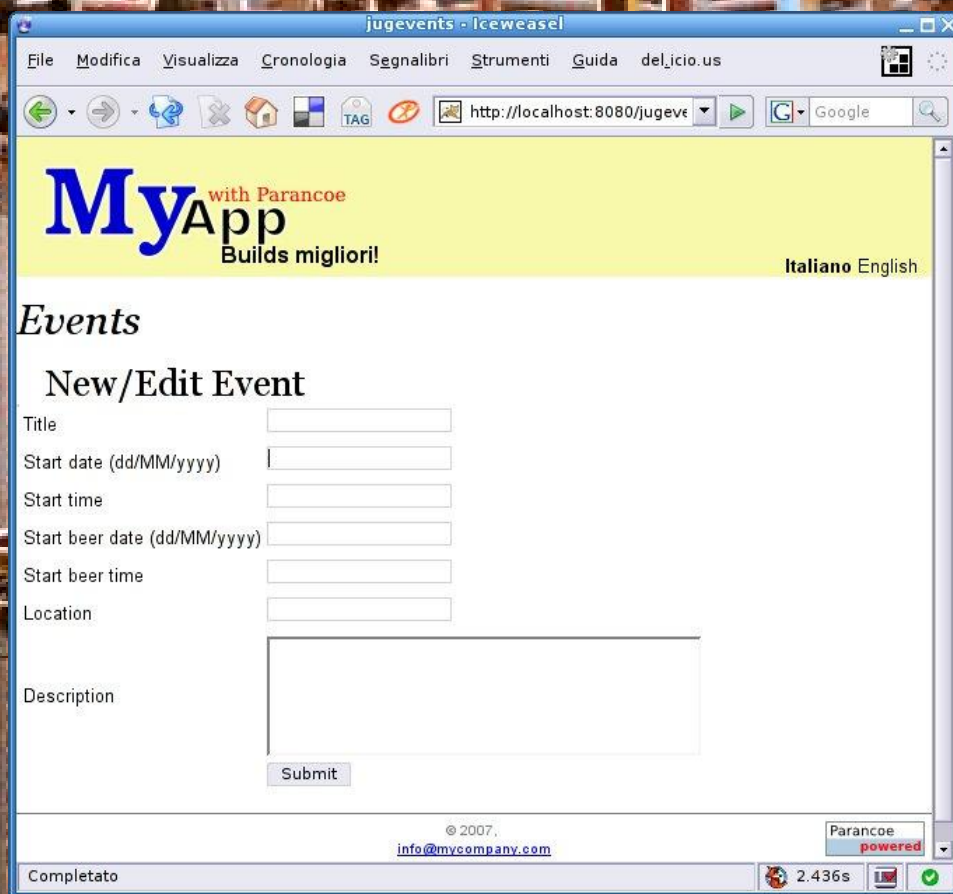

Starting with the management of the events

- > Scaffolding the web application using the Parancoe web archetype

```
mvn archetype:create -DarchetypeGroupId=org.parancoe \
-DarchetypeArtifactId=parancoe-webarchetype \
-DarchetypeVersion=1.0-SNAPSHOT \
-DgroupId=it.jugpadova -DartifactId=jugevents
```

- > Starts NetBeans!
([why netbeans 6.0?](#))

Live Demo!
